

This is project 4 Agent release

The image shows two screenshots from a web browser. The top screenshot is the Microsoft Azure portal, displaying the details of a virtual machine named 'VM1'. The VM is running Windows, located in the Korea South region, and its status is 'Running'. A warning banner at the top indicates that the 'VM1 virtual machine agent status is not ready'. The left sidebar shows the navigation menu with categories like Overview, Activity log, Access control, and Networking. The bottom screenshot is the Azure DevOps interface, showing the configuration for a deployment group named 'html'. The 'Type of target to register' is set to 'Windows'. The 'Registration script (PowerShell)' is a complex script that checks for PowerShell version, creates a folder, and downloads an agent. The 'Deployment pool' is set to 'B786-html'. The bottom of the screen shows options to 'Copy script to the clipboard' and 'Run from an administrator PowerShell command prompt'.

Microsoft Azure Portal - VM1 Overview

VM1 virtual machine agent status is not ready. Troubleshoot the issue →

Essentials

- Resource group (move): [ab123](#)
- Status: Running
- Location: Korea South
- Subscription (move): [Azure subscription 1](#)
- Subscription ID: 670bf85b-21b4-4dd2-8f2c-05dfcb74d52b

Properties

Property	Value
Computer name	VM1
Operating system	Windows
VM generation	V2
VM architecture	-
Agent status	Not Ready
Agent version	Unknown
Hibernation	Disabled

Networking

Property	Value
Public IP address	20.200.141.184 (Network interface vm1532)
Public IP address (IPv6)	-
Private IP address	10.0.0.4
Private IP address (IPv6)	-
Virtual network/subnet	VM1-vnet/default
DNS name	Configure
